

VidCAD[®] SQL Essentials

Engineering Excellence for 25 Years

Keep projects on time, on budget and online

The fastest way to realize the highest ROI on your investment in VidCAD is to learn to use it efficiently. These intensive videos center on practicing basic VidCAD skills to substantially improve design productivity.

If you have not used VidCAD before, these materials will save you weeks and even months of productivity. They are designed for beginning VidCAD users to learn the basics of completing full projects in VidCAD.

The VidCAD Essentials Video Training is a series of seven flash videos and other materials designed to help users learn essential commands and tools in VidCAD. During the two days of training, users will watch a video showing how to complete certain tasks, and then have actual hands on training by following the written training manual to duplicate the actions seen on the video. This method of watching and practicing reinforces a solid grasp of the concepts presented.

Focus of Training:

- Learn how to create and organize facilities, rooms and drawings

- Learn how to add equipment to a drawing and to the project database
 - Learn how to add custom equipment to the library
 - Learn how to add cables to a drawing and to the project database
 - Learn how to create simple Concept, Diagram and Rack drawings
 - Learn how to make global changes to all drawings and the project database
 - Learn the essentials of creating Cable and Equipment Reports and Labels using CableDOC Reporter
-

Upon completion of this training program, the next step in becoming a VidCAD power user is to attend an Intro to Design Automation class. Please contact your Account Manager or visit www.vidcad.com for more details on this class.
