

# VidCAD<sup>®</sup> SQL TecXpert

## Engineering Excellence for 25 Years

Keep projects on time, on budget and online—as a team!

*For every team member to be involved in a project, they need the right tools to accomplish their role in the project successfully. Harnessing the power of AutoCAD<sup>®</sup> and Microsoft<sup>®</sup> SQL, VidCAD has built the most powerful family of products for design and documentation, virtually eliminating drafting and typing when generating schematics, rack elevations and documentation of voice, video, data and security.*

VidCAD TecXpert is the ideal solution for team members who need the ability to read, markup and print the latest drawings, run reports and print labels. VidCAD TecXpert is simple to understand and use, and team members quickly become experts in implementation even without prior knowledge of AutoCAD<sup>®</sup> or Microsoft<sup>®</sup> SQL Server.

### Who Needs to Use VidCAD TecXpert?

- Project Managers
- Installers
- Accounting
- Clerical or Technical Assistants
- Customers
- Sales Reps

*As a salesperson, VidCAD allows me to communicate designs and projects with clients at clear, concise levels of detail other programs do not. It is an essential tool for us in all phases of a project from sales to integration to completion.*

*-Jeffrey V.*

### Configuration Options

VidCAD can be run as a standalone workstation, or is easily configured for enterprise use with the options of sharing the database, projects and authorization key over a network. Most networking and enterprise functionality is available at the Platinum support level. For more information on networking options, please contact your account manager.

# VidCAD TecXpert Features:

## Open any VidCAD or AutoCAD Drawing

- View drawings
- Print drawings or entire Sheet Sets

## Drawing Markup

- Markup drawings while maintaining the original drawing's integrity
- Markups can easily be viewed inside VidCAD SQL Engineer, where changes are then accepted or rejected

## Change Requests via Drawing Markup

- Managers and project owners can use TecXpert markups to submit detailed change request specifications

## Create Trouble-shooting Drawings

- Create InterCONNECT drawings to trace signal paths from any equipment with I/Os
- Bridge connectivity between equipment on multiple drawings by tracing the signals in a logical order

## Automatically create reports and labels

- No more TYPING! Simply create reports and labels inside of VidCAD
- Reports and labels are easily exported to Microsoft Excel or other software, or printed to your PDF writer

## Update Equipment and Cable Annotations

- New cable and equipment grids in VidCAD allow installation experts to easily group items by different sort groups, make changes to items and print reports or labels

## Easy Entry of Equipment Models in Projects

- Many teams rely on Sales Reps, Clerical or Technical Assistants to automate data entry for defining new products, entering costs and adding equipment lists into projects. New tools in VidCAD TecXpert make this even easier to accomplish.
- Safeguards are in place to prevent deletions of project info

## Top of the line support for users
